

Brainstorming & Idea Prioritization Template

Date	25 June 2026
Team ID	
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

S. No	Team Member	Idea / Suggestion	Category	Group No.
1	N.H.N.L. Mahathi	Use a Multiple Linear Regression model because the relationship between HDI and indicators like life expectancy and schooling is highly linear and easy to interpret. Try a complex ensemble model like XGBoost to capture potential non-linear data patterns.	Machine Learning Model	1
2	S. Poorna Chandra Rao	Build a Flask backend API to connect our ML model to a web interface. Create an interactive frontend using HTML/CSS/JavaScript where users can input Life Expectancy, Education, and GNI using sliders.	Backend / Deployment User Interface (UI)	2
3	C. Pavitra	Use historical datasets from the United Nations Development Programme (UNDP) and apply Simple Imputer to handle missing values.	Data Processing	3

Step 2: Idea Prioritization

Rate each group idea on feasibility and importance, then select the final idea(s) to move forward with.

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority	Selected (Yes/No)
1	Utilize Multiple Linear Regression. It is highly feasible, computationally fast, and provides excellent accuracy for this specific dataset.	Medium	High	1	Yes
2	Develop a web dashboard with a Flask Backend and HTML/JS frontend with input sliders	High	High	2	Yes
3	Source data from UNDP and implement automated handling for missing values	High	High	3	Yes
